

LEUCODIA Profiler

The new Diamond-Tipped Shank-Type Profile Cutters

The following technical features make this new generation of PCD tools stand out:

- Special shear angles allow highest cutting quality in laminated and coated materials.
- Continuous cutting edges avoid overlap-problems in MDF and solid wood.
- Particularly tough and wear resistant cutting materials guarantee economical and cost efficient production by means of long edge lives.
- Polished PCD tips result in very sharp cutting edges, which leads to the best cutting quality in fibre materials and optimized chipflow.
- LEUCODIA Profilers can be resharpened up to 6 times, which results in a particularly high productivity and low cost per meter of cut.

In short, LEUCO has set standards in profiling with Diamond Tools in respect of individuality, finest quality and fastest delivery times at attractive prices.
